

Year 9

Geography Programme of Study

In Year 9 you will study significant physical and human processes that are shaping our planet. You will look closely at the social, economic, environmental and political factors that are at play all around you. You will use research to help you develop your opinions and look to the future to discover how geography can lead the way in impacting change across the world.

Your teacher throughout the year will check how well you are progressing in developing your geographical skills and understanding. You may be asked to work on your own, in a pair or in a small group to carry out your assessments.

| End of year target level | | End of year 8 level achieved | |
